W3D4: Quiz

CS544 Enterprise Architecture

1. Describe the difference between `@Controller` and `@RestController`

`@RestController` is the composite of `@Controller` and `@ResponseBody`

2. What do you need to do (on the server side) to make a Spring Rest webservice send / receive XML?

Dependency for that XML thing

3. What do you need to do on the client (browser) side?

Need to say Accepts Content-Type

4. Why does a Spring Boot application need a `main()` method, while our previous Spring web applications never did?

Stand alone (has tomcat inside it). Therefore it is what start up, not Tomcat starting it.

```
java -jar spring-boot-app.jar
```
