

1. What are the possible ways a HTML document gets its style? List them in ascending order of precedence.
4. What is the use of @font-face rule?
5. What is the use of HTML id and class attributes?
6. I want to give background image to h1 tag and the image of my choice has same height as the height of h1, but just few pixels in width. What should be my css so that I see that background image throughout the width of h1 tag.
7. p, h1 all have two css properties in common let's say font-family and color. But h1 has larger font-size than that of p and p also have background-color yellow. Now, write CSS with least redundancy possible.
8. Would it be better to use a class, id or tag when?
  - You want to style one paragraph representing your company's mission statement
  - Several list items are important, they should appear in red
  - All h2 headings in the page should be underlined
9. What does following selectors select
  - a. nav li
  - b. nav > li
  - c. h1, h2, p
  - d. .special, .flashy
  - e. .special.flashy
  - f. #mission .highlight
  - g. p:nth-child(2)
  - h. p:nth-child(even)
